Healthy Kids/Healthy Lives

- Partners: SoLaHmo\(^1\), UMN School of Public Health\(^2\)
- Dates: 2011–2013
- Purpose: Identify Somali, Latino and Hmong cultural perceptions of healthy diet and exercise among families of children ages 3–12 years old to guide a future obesity prevention program
- Methods: 10 focus groups with parents of children ages 3–12 years old (3 Somali, 4 Latino, 3 Hmong)
- Results and Applications:
  - Diet: Parents from all three communities share a main goal about food for children: provide good foods so their children are healthy. Parents want to keep children happy, which may include eating unhealthy “American” foods.
  - Physical Activity: Parents share a common goal to support their children's’ physical activity. They want to keep their children happy and want to ensure children are safe while being active.
